

Volusion

Front End Developer

April 4th 2014 to Present

Javascript (jQuery) / HTML5 / CSS3

Developed front end features for an admin CMS to create an online store.

Created an interface that allowed the user to create a slideshow for their store that allowed drag and drop uploading of slides.

Wrote a HTML5 function that allowed users to drag and drop slides on-page to a preferred order.

Built pages that interacted with an API to post entered information, including as-you-type form validation.

Debounced checking to an API to see if the input was already used - for a product code that was already in use, for example.

Set up a gulp build system to minify Less/JS that export everything to a dist folder ready to go for production. This included JHint-ing on save.

Setup and wrote protractor end to end tests. To a lesser extent, wrote Karma/Jasmine unit tests.

58Phases

Front End Developer

April 2nd 2011 to April 4th 2014

Javascript (jQuery) / HTML5 / CSS3

Oversaw 11 coupon websites (running on Ruby on Rails).

Created 5 responsive coupon sites working with 2 rails devs and a contracted designer.

Worked with site leads to come up with UX changes to implement and A/B test them.

Responsible for fixing or delegating any bugs reported.

Assigned minor projects to a contractor. Quality checked their work to then merge and deploy.
